

Exciting Update for eFlex MAX Users

The eFlex MAX with serial numbers 2410xxxx and over now comes with pre-installed Firmware 1.1.18, introducing a convenient feature that allows users to easily switch inverter protocols using the power push button. This enhancement streamlines system management and adds flexibility to your setup.

If your battery's serial number is prior to 2410xxxx, you can request a firmware updating tool or enhance your system with the Guardian Monitoring Hub, which also supports this upgrade.

For detailed instructions on how to use this new feature, please refer to the updated User Manual or visit <https://www.fortresspower.com/products/eflex-max-5-4kwh/>

Change Log	Serial Number	Change
1.0	2410xxxxx	Ability to change inverter communication protocol.
